RISK RECOMMENDATIONS REPORT

FOR

Im

Bajaj General Insurance Limited.

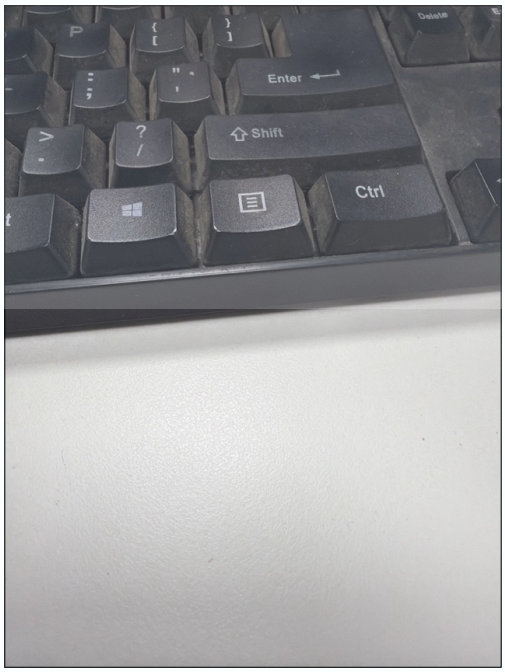
Bajaj Insurance House,

Airport Road, Yerwada, Pune - 411006 (India)

Property Risk Inspection,
Management and Evaluation

1. General Information

Client Name	**Im**
Occupancy	Aerial Ropeway including trolley stations
Address	Saki Naka Mumbai
State	Maharashtra
City	Mumbai
Pin code	400072
PRIME Reference No	**R000015387**
SI Range	**5 Crore - 10 Crore**
Geo Code	**NA - NA**
Risk Survey Done By	**Om**
Mobile No	**8355893883**
Email ID	**NA**
Date of PRIME Survey	**09 Feb 2026 03:36:19 PM**



Strictly Confidential

2. Property Risk Quality Rating

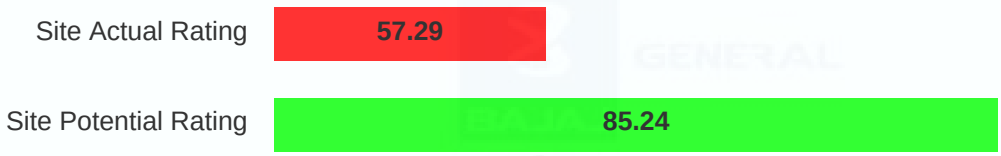
Overall Site Rating for this Location based on the Information provided.

Actual Site Rating	
Site Actual Score	57.29
Site Actual Rating	Poor Risk

Potential Site Rating	
Site Potential Score	85.24
Site Potential Rating	Good Risk

Risk Meter	Poor Risk	Adequate Risk/Confirm RIM	Favourable Risk	Good Risk

Overall Actual and Potential Rating for Occupancy



Risk Score Band	0-60	61-70	71-80	>80

Site Actual Rating: Indicates Current Rating/Position of the Risk.

Site Potential Rating: Indicates Future Rating of the Risk after implementation of Risk Recommendations suggested in this Report.

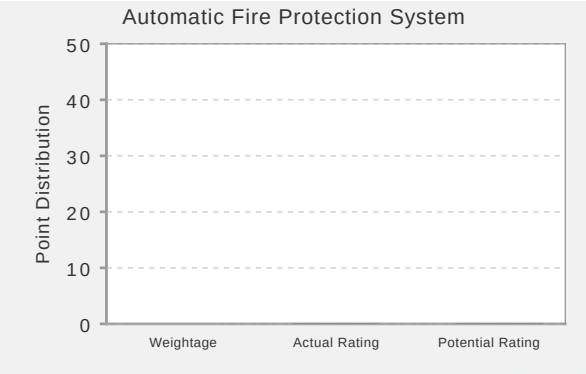
3. Risk Rating Element Profile

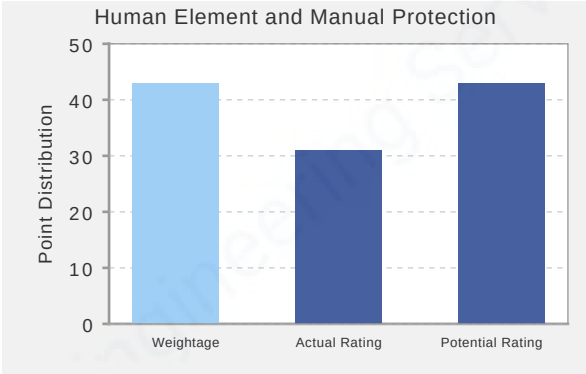
For arriving at the Risk Engineering Rating, Bajaj General Risk Engineering Services and Property Underwriting Team have considered the following Important Risk Elements

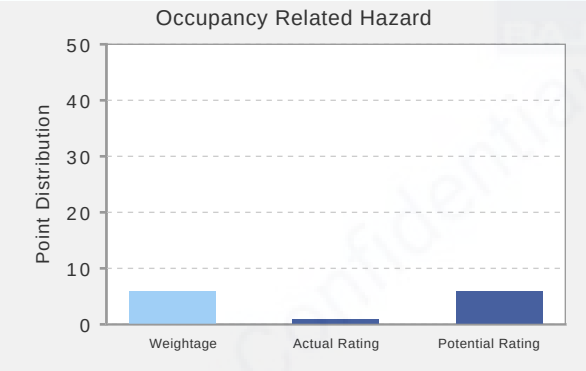
1. **Automatic Fire Protection System:**
   Signifies the presence of Automatic Sprinkler Protection/Gas Extinguishing System at Process area, Raw Material (RM), Finished Goods (FG) and Other Hazardous area in Plant/Facility/Warehouse area.
2. **Human Element & Manual Protection System:**
   Indicates the availability of Fire Hydrant, Fire Extinguishers, Fire Fighting/Mock Drill Training, Adequate Housekeeping and Emergency Plan provided at the Site.
3. **Occupancy Related Hazard:**
   Indicates Process Hazard, Combustibility/Flammability of RM/FG used in the plant and Flame Proof Electrical Fittings provided in the Plant.
4. **Surveillance and Automatic Fire Detection System:**
   Presence of Smoke Detection System/Gas Detection System, CCTV Camera, Security Guards and Boundary Wall.
5. **Construction:**
   Indicates Type of Plant Building Construction, Single Block Exposure, Separation between each Block and any Basement Exposure.
6. **External Exposure:**
   Indicates surrounding exposure such as Nala/Water Body/River Crossing, Plant Exposure having common boundary Wall and any claim related to AOG Peril.

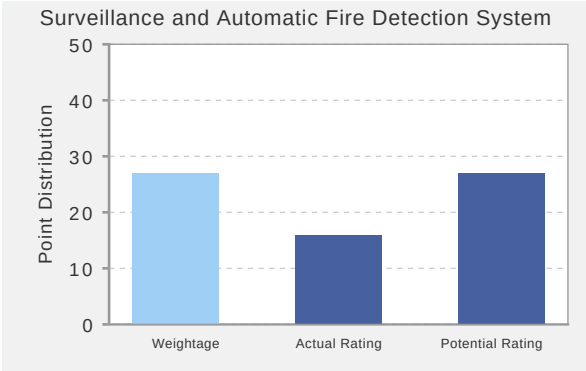
Strictly Confidential

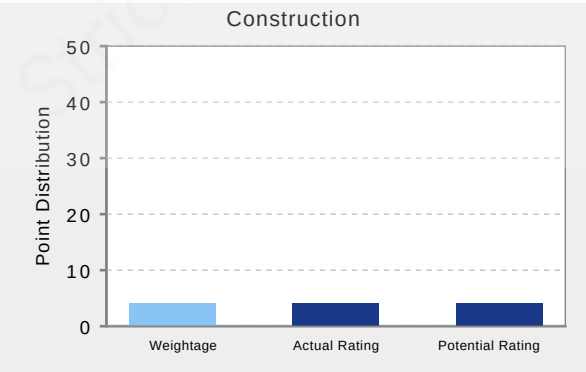
Below Graph indicates Current Risk Features(Actual) against total point allocated(Weightage) to each element. Potential Rating indicate rating after implementation of Recommendations.

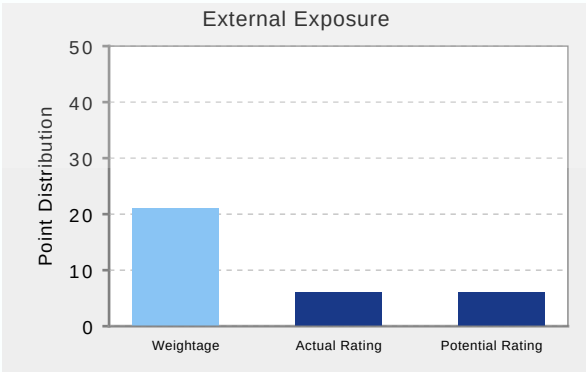








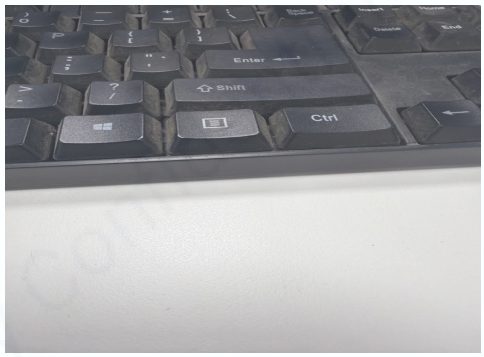


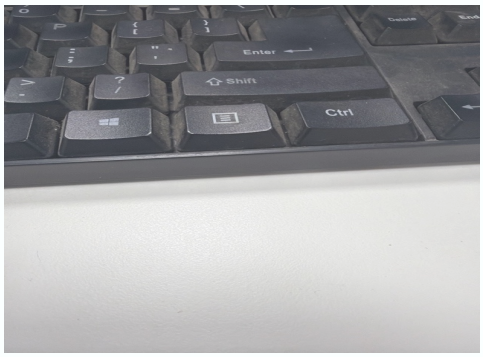


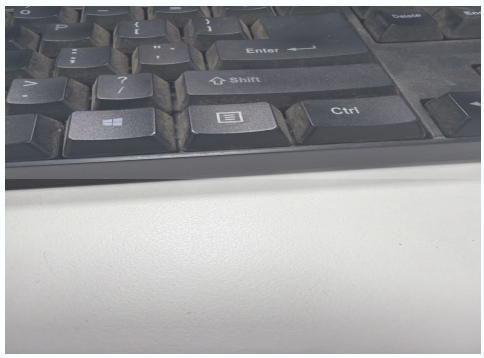
4. Risk Assessment Report

1	**Overall Housekeeping practice followed at the premises?**
Explanation	Reported that all the stocks are stored in orderly manner. No Haphazard storage practice noted at the site.
2	**Fire Fighting Training and Mock Drill are provided to employee?**
Explanation	Employees are not trained in Fire Fighting Training and Mock Drills
3	**What are the fire protection facilities available for your premises?**
Explanation	For fire protection, site is protected with hydrant system, fire extinguishers & nearest fire brigade would help to minimize property damage.

Sr No	Details	Capacity	Flow Units/HP
1	Fire Water Tank	130	m3
2	Main Electrical Pump	96	m3/Hr
3	Diesel Driven Pump	171	m3/Hr
4	Jockey Pump	20.8	m3/Hr
5	Total No of Hydrant Points	41 to 50	No
6	No of Fire Extinguishers	46 to 50	No

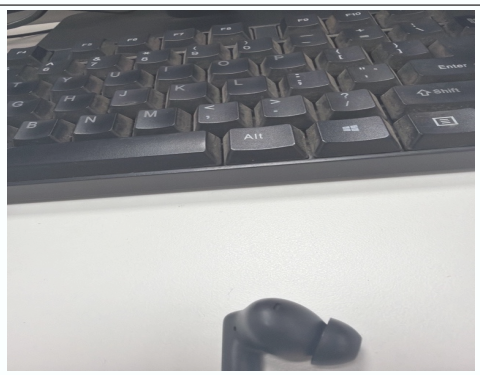






4	**Are all the fire protection equipment maintenance being done by inhouse team / Third Party Annual Maintenance Contract (AMC)?**
Explanation	Site has an approved third-party vendor for Annual Maintenance contract for Fire Protection equipment and surveillance.
5	**Does the facility use Flame proof/Industrial Type Electrical Cables and fittings in hazardous areas?**
Explanation	No Flame Proof Electrical Fittings have been provided at the Critical/Hazardous area of the plant/warehouse/site.
6	**What is the condition of electrical fittings/wiring installed at the site**
Explanation	Electrical Wiring/cables is routed/enclosed by PVC Conduit.   
7	**Is the facility equipped with Automatic Smoke Detection System in all the important areas?**
Explanation	There are no Automatic Smoke Detection System installed in Critical/Hazardous/Warehouse
8	**Does the facility have functional CCTV cameras installed in the premises?**
Explanation	This facility has a functional CCTV installed at the Critical area
9	**Is the facility protected by boundary walls or fence?**
Explanation	Site is protected with RCC Boundary wall from all the sides.
10	**Does the facility have a dedicated security team?**
Explanation	This facility is protected by 24 x 7 trained security guards
11	**What is the type of building construction of the site?**
Explanation	Plant/Warehouse/Site are constructed by Roof - AC / Walls - Brick with RCC frame/outdoor plant
12	**What is the separation distance between storage/process/utility areas?**
Explanation	Separation distance between process area, Storage and Utilities are located more than 20mtrs
13	**Is your risk located in the basement/below the ground level/below the road level?**
Explanation	This Risk is not located in the Basement/Below the ground level of the Road.
14	**What external occupancies surround the facility sharing common boundary wall?**
Explanation	This facility is surrounded by Industrial Risk sharing common boundary wall
15	**Is the facility surrounded by any water body (Nalah, Canal, River and Sea) within a distance of 1km?**
Explanation	This facility is not surrounded by Nala, Canal, River, Sea and water body located within 1km from the Risk
16	**Has this location been affected by Flood/ Cyclone/Inundation/any other AOG peril in past 3 years?**
Explanation	This site had affected by Flood/ Cyclone/Inundation/Other AOG in the Past.

5. Pictures from the Site



6. Recommendation

Risk Element & Recommendations/ Suggestions for Client Reference	
	Human Element and Manual Fire Protection System
1	**Fire Fighting Training and Mock Drills**
	Provision of Fire Fighting Training to in house employees would help to extinguish at incipient stage and minimize the property damage to a great extent. Mock Drills training help to evacuate the employee/staff and necessary action can be taken at the time of emergency/fire incident in the site.

Strictly Confidential

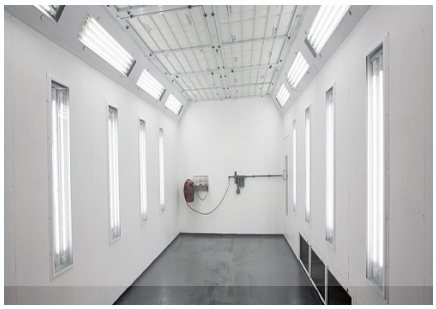
	Occupancy Related Hazard
1	**Flame Proof Electrical Installation**

Bajaj General Insurance Company strongly recommend to use Flame Proof Electrical Fittings in following Hazardous area for avoiding electrical short circuit/Static Electricity fire accident in Warehouse/Plant premises:

1. Hydrogenation Reactor(Chemical Reactor/Autoclave)
2. Hydrogen Cylinder Storage Shed
3. Solvent Storage area(Class A,B and C)
4. LPG Bank and Bullet area
5. High Speed Diesel and Furnace Oil Storage area
6. Paint Booth
7. Solvent Dispensing area
8. Tank farm during Solvent Transferring
9. Warehouse/Storage area having flammable storage
10. Dust Explosion possible area
11. Underground Hydraulic Cellar
12. Flammable Mixing area

Flame Proof Electrical Fittings

Flammable Solvent Storage area



Paint Booth

Image is only for Representation. (Not from client premises.)

2	**Maintenance of Electrical System**

Replace Loose and Tapered Electrical Fittings on priority. Use metal conduit for all cable routed inside the Process /Warehouse area

	Surveillance and Automatic Fire Detection System
1	**Fire Detection System**

Installation of Automatic Fire Detection helps to locate the fire at incipient stage and take necessary action to minimize the fire to a great extent.

Manual alarm **call points** are designed for the purpose of raising an alarm manually once verification of a fire or emergency condition exists, by operating the push button or break glass the alarm signal can be raised.

We recommend to install Automatic Fire Detection and Manual Call point in the following areas as per **IS-2189**(Installation and Maintenance of Automatic Fire-Detection and Alarm System--Code of Practice) or **NFPA-72**(National Fire Alarm and Signalling Code):

1. Raw Material Storage area
2. Finished Good Storage area
3. Utility area
4. Electrical Room(HT/LT) and Electrical Shaft area
5. Office Building
6. Basement area including Car Parking
7. Server Room(Above Ceiling and Below Ceiling area)
8. Process area(if the temperature is less than 30 Degrees)
9. Linear Heat Sensing Cables on Cable Galleries and Coal Conveyors

Image is only for Representation. Fire Detection System & Manual Call. (Not from client premises.)

7. Reference Standard followed for Risk Engineering Application

Following are the Reference Standard would be use for Generating Risk Rating and Recommendation

1. Tariff Advisory Committee

2. Indian Standard

- IS-15105 : Standard for the Installation of Automatic Sprinkler Protection System
- IS-2190 : Standard for the Installation of Automatic Fire Detection System
- IS- 2189: Standard for the Installation of Fire Extinguishers
- IS-13039: External Hydrant System – Provision & Maintenance

3. National Fire Protection Association (NFPA)

- NFPA -13: (Installation of Automatic Sprinkler Protection System)
- NFPA- 25 (Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems
- NFPA -20 (Standard for the Installation of Stationary Pumps for Fire Protection

4. FM Global Standards

- FM DS 0200 ((Installation Guidelines on Automatic Sprinkler Protection System
- FM DS 0326 (Fire Water Demand Calculations) and Etc.

5. XL Catlin (XL Gaps Guidelines)

6. Nat Cat Estimation

- Munich Re -Nathan Tool
- Swiss Re Flood Map Tool
- Internal Flooding Mapping

Strictly Confidential Engineering Services

8. Bajaj General Risk Engineering Services

Bajaj General Insurance Company Risk Engineering Department solely a support function for Property Underwriting Department. Bajaj General Risk Engineering Department has an experienced Risk Engineer worked in Power Plant, Integrated Steel Plant, Textile, Chemical Plant and Engineering Project with over more than 12 to 15years in their Respective Fields.

Risk Engineer performs Technical Risk Assessment for our Internal and External Client pre and post policy booking which is helpful for Underwriter to Quote Policy in term of Good Coverage benefits for Client.

Bajaj General Risk Engineering Department conduct Risk Assessment of Industrial sector considering Local and Multinational Fire Protection Standards such as NFPA, FM and AXA XL, Indian Standard and TAC. We suggest Risk Recommendation and Best Industrial practice across all the Industry which will really helpful for improving Client Risk.

Risk Engineering Survey would assess following aspects of the Risk present at the client premises and suggest possible recommendations. Detailed Risk Engineering Report would contain technical content, Risk Summary and Recommendations.

1. Automatic Fire Protection System
2. Passive Protection System(PPS+Construction)
3. Human Element
4. Surveillance(Surveillance +Automatic Fire Detection System)
5. Neighbouring Exposure
6. Occupancy Related Hazards
7. Risk Management
8. BI Exposure
9. Probable Maximum Loss
10. Industrial Best Practices/Benchmarking Standards.

Strictly Confidential

9. Disclaimer

This report is merely a risk assessment at the location where the property/risk cover to be insured, as of date of this report, and any advice in the report is merely for the purpose to reduce the probability of risk/loss. Hence this report is not dealing with assessment of value of property/risk to be insured and as to whether the proposer's declared property/risk to be insured and quantum thereof exists or not for which the principle of Uberrima fide applies for the proposal of proposer/proposal through intermediary or RFQ and accordingly the proposer's/intermediary/RFQ declared value of property/risk to be insured is the basis of underwriting decision of Bajaj General Insurance Limited ["BGIL" or "Our Company"]. Also this report and advise therein shall not be construed as (i) complete with all possible hazards are identified by BGIL, (ii) there are no other hazards, (iii) recommending to compulsorily underwrite and issue policy to proposer, (iv) basis for proposer to insist for policy issuance by BGIL, (v) BGIL making any promises nor certifying the operations of proposer/proposed property/risk are fully safe and or compliant with all the health and other standards of safety and precautions under various applicable Laws [Act, Rules, Regulations, Schemes, notifications] for which proposer shall ensure to duly take care and itself comply with all applicable laws and health and other standards of safety.
